

Above: Initial layout for configuration of touch- and microphone- sensors, Arduino, and network of LED stars.

Below: Working on implementing sensors and incorporating strands of LED stars into (partially completed) painting.

INTERACTIVE STARRY NIGHT PAINTING

Annabel Yau

Jennifer Xiao

Sasha Manghise

Andy Jin

An interactive version of Van Gogh's *Starry Night*, which invites users to 'move' the wind and stars by blowing on sound-sensitive and pressing touch-sensitive areas of the painting. Inspired by the original artwork's depiction of the natural ebb and flow of the night sky, our piece aims to capture this essence in a new form, through human interaction and LED-powered stars that glow and fade in succession.
